Data Conversion/Migration Services

DATA CONVERSION

OLAV's team is capable of handling any of your data conversion needs, no matter the scale.

MASS PRODUCTION SYSTEM DATA CHANGES

Mass data changes in Asset Suite production system - modification of equipment, catalog (spare parts), manufacturers, vendors, vendor addresses, etc.

NEW FACILITY DATA INTO ASSET SUITE

OLAV has moved purchased facility data into Asset Suite, including matching and consolidating all data – manufacturers, vendors, vendor addresses, and catalog (spare parts) and standardizing data.

MASS DOCUMENT (TIDBLOB DATA TABLE) ADDITION/EXTRACTION

Mass document (TIDBLOB) addition to or extraction from Asset Suite, which uses a non-standard compression algorithm that is difficult to deal with.

DONE RIGHT THE FIRST TIME!

- ✓ Initial load >90% accuracy.
- ✓ Business-relevant data
- ✓ Leveraging client SMEs
- ✓ Minimal rework
- ✓ High data integrity

OLAV's industry-unique data conversion and migration process is made possible only because of the decades of experience and familiarity our senior consultants have with every Asset Suite module and component and is illustrated in the following graphic:

CLIENT'S FULL DATA INITIAL LOAD

QUALITY SPECIFICATIONS

↓

ITERATIVE TESTING

↓

PRODUCTION DATA LOAD (< 24 HRS)

↓

POSTPRODUCTION = ZERO to MINMAL DEFECTS

Your consultant choice is critical to your project's success. Most consultants will initially load Asset Suite generic test data. This is far less effective than initially loading client full data and produces unnecessary errors, delays and costs because test data is totally unfamiliar to your IT and business process personnel.

OLAV's senior Asset Suite experts average over 30 years of data conversion and migration experience that equips them to load **your own corporate data** in your very first test data load.

This ability to customize your early test data load to your own company data will **jump-start your project** and produce fewer errors, lower costs, and facilitate meaningful system training.

This special capability is what we at OLAV call our industry-unique **Full Early Data Load**. It takes more seasoned data conversion expertise but will save your project both time and money. It will also produce more quality data results to put to better actual use by your company's business process experts.
